

GEPRO

Dual Ratchet Spanners Ratchets BOTH ends!

Gets
where
Gear
Wrenches
cannot!

30°
movement

✓ Meets
ANSI
Standards.

The GEPRO dual ratchet spanner has an innovative uni-directional braking jaw on the open end side of the spanner, which makes this wrench **able to ratchet on any nut or bolt*** you are working on. The patented uni-directional braking jaws apply pressure both on the flats and edges of the nut and bolt which protects it from been rounded off. This unique tool offers more advantages and benefits, especially with the combination of the 72 teeth gear wrench.

The GEPRO dual ratchet spanner is **ideal for very difficult and restricted areas where gear wrenches cannot get over the nuts or bolts** (eg hoses or pipes).
