Helps Protect Your Fruit Trees from Mediterranean Fruit Flies WITHOUT harmful pesticides

GEPRO Organics Mediterranean Fruit Fly Traps use an attractant which is irresistible to male Mediterranean Fruit Flies ONLY. (No beneficial insects are affected.)

Simply place the attractant in the trap and hang it in or around the fruit trees you want to protect.

This allows you to both reduce the number of fruit flies and, when used all year round, to detect the onset of fruit fly season.

**Suitable for Commercial,
Organic, and Home growers**
